CHAPTER 1

1. INTRODUCTION

1.1 OBJECTIVES

- To visualize distribution of capacity and traffic for major ports.
- To improve the efficiency in transportation of freights and passengers across major ports based on rail corridor congestion analysis.
- To easily track the ports and improve port connectivity.

1.2 PURPOSE

1. Developed analytics dashboard can be used to track the freight movement patterns across major ports.
2. It can be used to visualize the capacity and to ensure less traffic on the ports.
3. It helps predict delays at the ports due to congestion and makes supply chain efficient.

IBM Cognos Analytics

CHAPTER 2

2. LITERATURE SURVEY

PAPER-1: PERFORMANCE ANALYSIS OF MAJOR PORTS IN INDIA- A QUANTITATIVE APPROACH.

Publication year : January, 2016

Author : Anindita-Mandal

Summary : The performance of 13 significant Indian ports is examined in the report with regard to important operational performance indicators. India's participation in global trade is growing as a result of its rapid economic expansion. This increases the strain on these ports, which handle a sizable amount of the commerce, to operate as efficiently as possible. The study examines the state of each port in various performance categories by conducting a systematic analysis of various performance indicators over a 10-year period (from 2003 to 2013).

PAPER-2: ENHANCING PORT ACTIVITIES USING INFORMATION AND COMMUNICATION TECHNOLOGY.

Publication year : April,2020

Author : Shuhong Peng, Junaid Quair

Summary :The topic of this essay is how to employ technological improvements to enhance port services and operations. The goal is to provide a comprehensive study of the limited research on smart ports with a focus on the role of ICT (Information and Communication Technology). A few of the port services that are optimised by smart port management include commodity inspection, customs clearance, transportation planning, procedures, and applications, customer service, market information exchange, and insurance provisioning. It has been suggested to use IoT platforms to build a networked and collaborative platform.

PAPER-3: CONCENTRATION ANALYSIS OF CONTAINER TERMINALS IN INDIA.

Publication year : July,2021

Author name : K.Chandrasekhar Iyer, V.P.S.N.Nanyam

Summary : This article investigates India's container terminals' propensity for reconcentration. India's container terminals have grown by 46% in the last five

years, and since 2015, they have grown by 9% annually. To take advantage of the underutilised capacity at container terminals, efforts to modernise equipment and digitise processes have been made. This has led to a rise in the use of container terminals across the nation. In terms of the growth share matrix over the underconsideration period, the Adani International Container Terminal (AICT) has emerged as the top performer. analyses India's container terminals' tendencies toward reconcentration.

PAPER-4: AN INTEGRATED BERTH ALLOCATION AND YARD ASSIGNMENT PROBLEM FOR BULK PORTS: FORMULATION AND CASE STUDY.

Publication year : August,2015

Author name : Jasem Al-Hammadi and Ali Diabat

Summary : As a result of the effects of globalisation during the past 10 years, maritime transportation has seen remarkable growth. The rapidly growing demand for commodities supplied by water has led to a lot of attention being paid to improving port efficiency by encouraging the efficient use of available resources. Optimization is crucial in achieving the economical goal of improving port efficiency as opposed to the pricey alternative of increasing existing capacity. The integrated dynamic hybrid berth allocation and yard assignment problem is examined in the context of bulk ports in the current research (BYAP). Key ideas are taken into account in order to construct an usable and realistic model. **PAPER-5: FROM HISTORICAL POSITIONING DATA TO UNSUPERVISED MARITIME TRAFFIC MONITORING.**

Published year : May,2017

Author Name : Virginia Fernandez Argudas,Giuliana Pallota,Michele Vespe

Summary : Due to the high volume of maritime traffic and its consequences on the economy, ecology, safety, and security, a system that can monitor maritime traffic without supervision is required. An automated method for creating synthetic maritime traffic is suggested in this research. The primary goal of marine surveillance is to make it possible to automatically monitor, analyse, and comprehend nautical activity. To improve the MSA, the proposed technique is utilised to analyse, model, and depict large amounts of marine traffic data (Maritime Situational Awareness). Creates a network-based picture of maritime

traffic by analysing past self-reporting positioning data. The representation of maritime traffic using self-reporting data has been addressed by a number of ways.

CHAPTER 3

3. IDEATION & PROPOSED SOLUTION

3.1 EMPATHY MAP

3.2 IDEATION & BRAINSTORMING

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

3.3 PROPOSED SOLUTION

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Improving port connectivity and reducing the congestion on the rail corridors using Data Analytics.
2.	Idea / Solution description	The Indian Railways has a capital base of about Rs. 1 lakh crores and is often referred to as the lifeline of the Indian economy because of its predominance in the transportation of bulk freight and long-distance passenger traffic.
3.	Novelty / Uniqueness	Traffic survey and assessment of traffic volumes identification of technically and economically viable route /Alignment

4.	Social Impact / Customer Satisfaction	Adequate resources will be provided. India's electrical crisis 86% of the open wages on the railway are used to deliver poles to different power plants in India. An appropriate supply of resources will be made available to prevent power outages.
5.	Business Model (Revenue Model)	Railway ports provide for the tracking of the flow of commodities being transferred from one location to another. Government can ensure reduced traffic on the ports by using a data analytics dashboard.
6.	Scalability of the Solution	With the establishment of the railway as a development effort and the use of data analytics, the Indian economy has moved into a high growth zone.

3.4 PROBLEM SOLUTION FIT

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS The Central Government, which manages Indian Railways, will benefit most. The organization that routinely transports its goods	6. CUSTOMER CONSTRAINTS CC The Indian railway system is a pillar of our economy. It's crucial to <u>analyse</u> those because it's challenging to manage traffic in those major ports.	5. AVAILABLE SOLUTIONS AS Several interlocking device types were introduced. Interlocking manually: Relay, Telematics, Mechanical, and Human Electronic, free-wired relay automatic interlocking. Failure of the interlocking system can result in a collision. There are two types of ERTMS, the common <u>signalling</u> and communication system.(ATP) GSM-R ETCS (European Train Control System) (Global System for Mobile Communications - Railway) None of these options were effective enough.	Explore AS, differentiate

Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS J&P Data analytics can help in reducing rail corridor congestion and enhance the port connectivity Effective analysis must be done of all the port traffic data. A critical part of port development is port-rail connectivity, both from an economic and competitive perspective and to minimize the adverse externalities on people and the environment.	9. PROBLEM ROOT CAUSE RC 1.Delay in transporting goods 2. Loss for Industries	7. BEHAVIOUR BE The customer is the one who sends their goods by train; they need to know if they will arrive safely. They also require the reputation of Indian Railways, which promotes growth for both parties.	Focus on J&P, tap into BE, understand RC

Identify strong TR & EM	3. TRIGGERS TR Due to increased traffic, it was necessary to assess the capacity and traffic in key ports.	10. YOUR SOLUTION SL Our <u>Idea</u> is to ask the details of their product and start destination with their given	8.CHANNELS OF BEHAVIOUR CH 8.1 ONLINE Customer can track their goods in their place 8.2 OFFLINE After the product is reached their required destination Customer will be informed through a normal message which does 't required any network
	4. EMOTIONS: BEFORE / AFTER EM BEFORE: They were unhappy about their products. AFTER: They were at ease and felt safe. Transportation		

CHAPTER 4

4. REQUIREMENT ANALYSIS

4.1 Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Input Acceptance	The dashboard accepts user input by means of selecting the location of the ports.
FR-4	Options for User to Filter location of ports	The user can use filter options to view ports by countries.
FR-5	Visualization of ports.	The dashboard offers a number of visualisation methods to follow the flow.
FR-6	Providing Delay Information of trains.	The dashboard can give the user information such as the delay of a specific train reaching the ports.

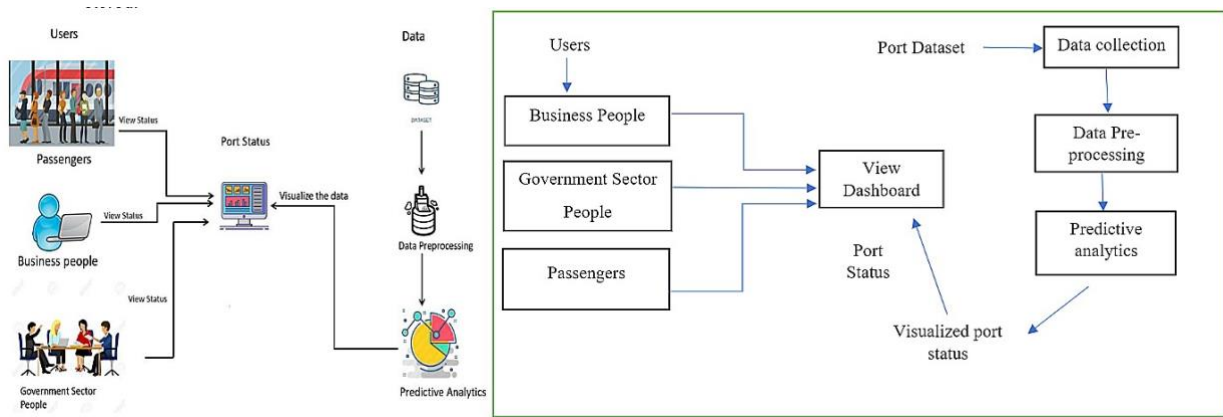

4.2 Non-functional Requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The dashboard's visual quality is faultless and the user can utilise it continuously. Users can get the consistency and style they want from the dashboard.
NFR-2	Security	The dashboard is well protected so that user data is kept private and it is also impervious to all types of attacks.
NFR-3	Reliability	The failure rate is quite small, and employing the measures, any failure may be quickly fixed. As a result, the dashboard is now significantly more trustworthy.
NFR-4	Performance	The performance is enhanced by the dashboard. It provides the user a simple and adaptable UserInterface.
NFR-5	Availability	The dashboard is constantly accessible to users. The dashboard is made available so that the user can view it from any location at any time.
NFR-6	Scalability	The dashboard can be expanded greatly. It is capable of enduring any change in load.

CHAPTER 5

5. PROJECT DESIGN

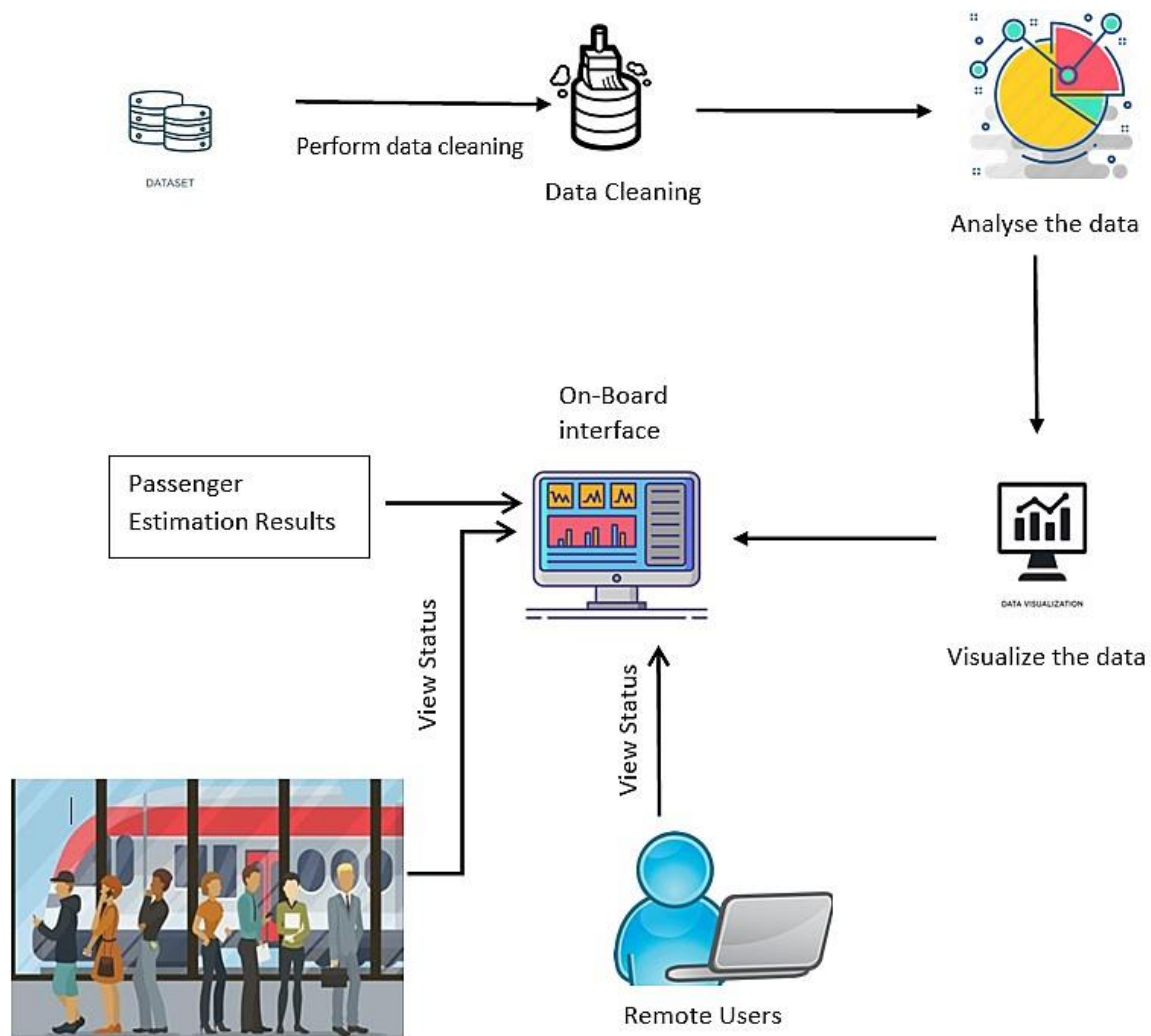

5.1 DATA FLOW DIAGRAM

5.2 SOLUTION ARCHITECTURE

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

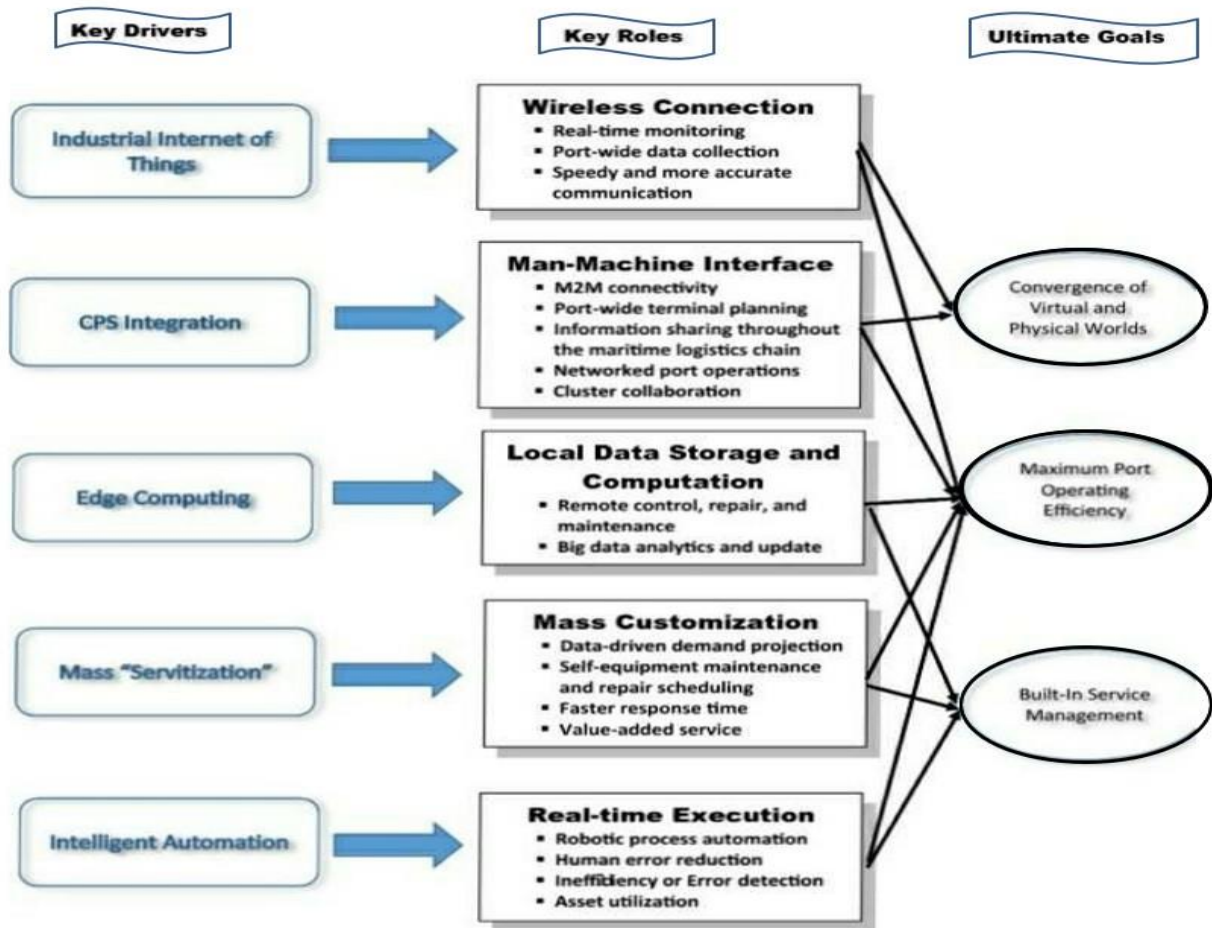

Reference:

<https://aws.amazon.com/blogs/industries/voice-applications-in-clinicalresearch-powered-by-ai-on-aws-part-1-architecture-and-designconsiderations/>

5.3 TECHNICAL ARCHITECTURE:

- To regain some of the market, it has lost over past decades and regain market share in some commodities and overcome the challenges and to maintain sustainable growth in all its commodities.
- Reducing the congestion on rail corridors and improving port connectivity.
- The development of two Dedicated Freight Corridors across key ports

ASSIGNMENT-1

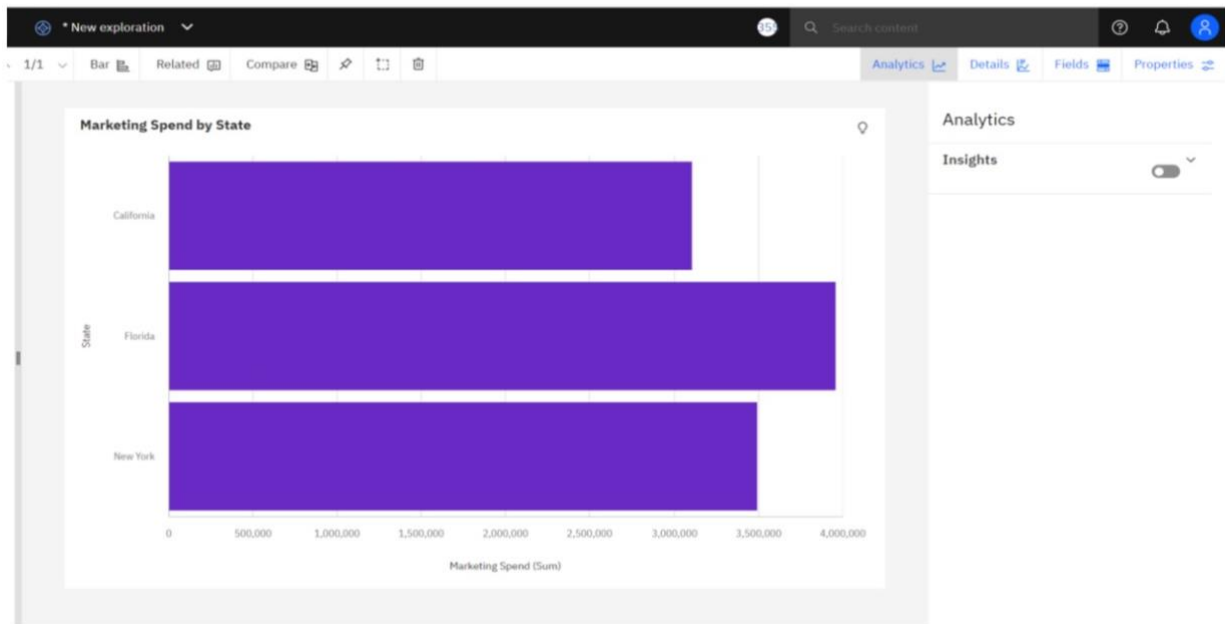

Dataset: 50-Startup-Dataset

Challenge: Upload the dataset to Cognos Analytics, explore and visualize the dataset. About the 50 startups dataset. This particular dataset holds data from 50 startups in New York, California, and Florida. The features in this dataset are R&D spending, Administration Spending, Marketing Spending, and location features, while the target variable is: Profit.

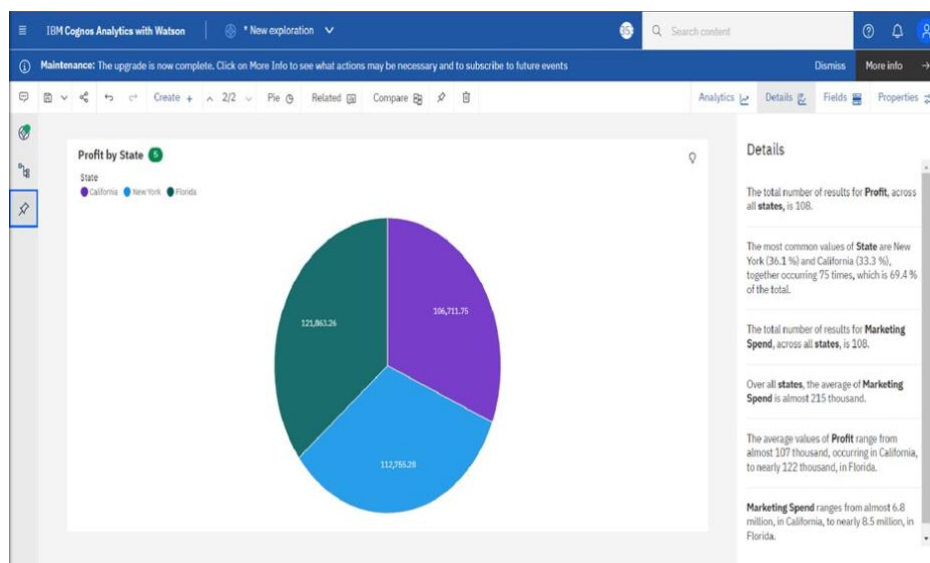

1. R&D spending: The amount which startups are spending on Research and development.
2. Administration spending: The amount which startups are spending on the Admin panel.
3. Marketing spending: The amount which startups are spending on marketing strategies.
4. State: To which state that particular startup belongs.
5. Profit: How much profit that particular startup is making.

6. PROJECT DEVELOPMENT

6.1 Sprint Planning and Estimation

DATE	MILESTONE	ASSIGNEE	STATUS	DESCRIPTION
31/08	Data Collection-Download dataset	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	The dataset for Traffic and Capacity Analytics is to be collected.The dataset which is considered will have the port information
7/09	Data Pre-processing 1.Renaming the coloumn names 2.Preparing calculations 3.Checking for NULL values 4.Checking for ouliers 5.Summarization of dataset 6.Label Encoding	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Preprocessing involves renaming the existing coloumn names into meaningful one,preparing calculations such as calculating traffic percent,checking for NULL values in the dataset.
14/09	Visualizing the dataset	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Visulaizing the dataset involves plotting the dataset using various plots and doing analysis on that.
21/09	Model Building 1.Building the model using suitable machine learning algorithm 2.Training and testing the model	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	completed	Using certain algorithms to build the model. Those algorithms include 1.Linear regression
28/09	Dashboard Creation	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Dashboard for visualizing the port status will be developed.
7/10	Ideation Phase 1. Litreature survey on the selected project and information gathering. 2. Prepare the empathy map. 3. Ideation	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Start the ideation process
10/10	Project Design Phase -1 1. Proposed solution. 2. Prepared fit solution 3. Solution Architecture	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Prepare the proposed solution document, which includes the novelty, feasibility of idea, business model, social impact, scalability of solution, etc.
12/10	Project Design Phase -2 1. Customer journey. 2. Functional requirements 3. Data flow diagram. 4. Technology architecture	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Prepare the customer journey maps to understand the user interactions & experiences with the application (entry to exit) ,Functional requirements and construct architecture
31/10	Project Planning Phase 1.Milestone Activity List 2.Sprint Delivery plan	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	Completed	Prepare milestone activity list and sprint delivery plan for outline of work flow
02/11	Project Development Phase 1.Sprint -1 2.Sprint-2 3.Sprint-3 4.Sprint-4	Aishwarya. M Raakesh. N Shenoybabu. B Prithviraj. A	completed	Plan of each task sprint to be developed.

6.2 SPRINT DELIVERY SCHEDULE

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

Velocity:

Imagine we have a 6-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}}$$
$$= 20/6 = 3.33$$

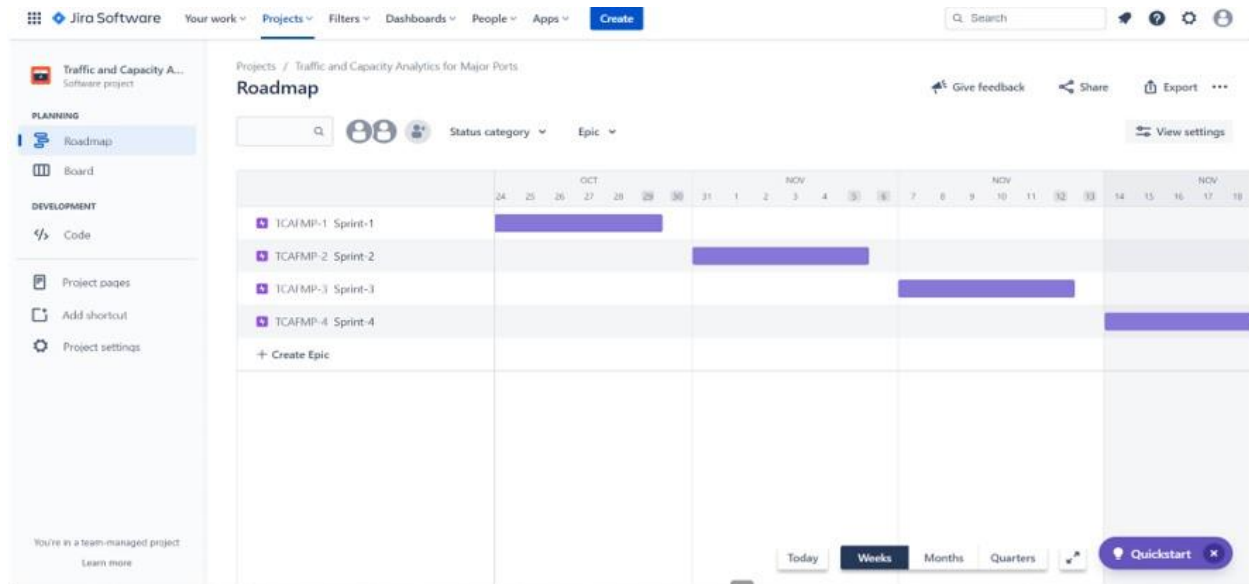

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

Sprint Burndown Chart

CHAPTER 7

CODING AND SOLUTIONS

Data Analytics includes 4 modules:

- a. Data Collection
- b. Data Preparation and Calculation
- c. Data Visualization

1. Data Collection:

Data collection is the process of gathering, measuring, and analyzing accurate data from a variety of relevant sources to evaluate outcomes, forecast trends and probabilities. Major data sources used are spreadsheets and csv files.

2. Data Preparation:

Some prevalent challenges faced while collecting data are inconsistent data, ambiguous data, duplicate data, inaccurate data, too much data, etc. To overcome this problem data preparation is done.

It is the process of profiling, cleansing, transforming and validating data.

- Data profiling and cleansing
- Data structuring
- Data transformation ■

Data validation

Implementation Details

1. Data analytics for analysing and estimating traffic and capacity on major ports is done by creating various graphs and charts to highlight the insights and visualizations.
2. Plotting different graphs give broad understanding about the data and relationship among the features of data.
3. This supports in creating meaningful dashboards for exploring the data and making future predictions from them. **Code** [home.html](#)

CHAPTER 10

ADVANTAGES AND DISADVANTAGES

ADVANTAGES

- To regain some of the market, it has lost over past decades and regain market share in some commodities and overcome the challenges and to maintain sustainable growth in all its commodities.
- Reducing the congestion on rail corridors and improving port connectivity.
- The development of two Dedicated Freight Corridors across key ports
- Adequate resources will be provided.
- Businesses using railway ports can easily track.
- Government can use data analytics dashboard to ensure less traffic on the ports.

DISADVANTAGES

- It is difficult to handle port connectivity to identify the congestion.
- It makes the user tensed and frustrated

CHAPTER 11

CONCLUSION

The impact of data analytics in port traffic analysis has already made a substantial difference in the ability of traffic in the port. The role of data analytics in this process has continues to grow and expand as more types of data become available. New tools are available that makes the results of the analytics clear and easy for people to access. Realizing the potential of data analytics to transform the rail port connectivity begins by understanding how the technology can be applied. Data analytics holds the key to unlocking this vital information

CHAPTER 12

FUTURE SCOPE

The network criss-crosses the nation, binding it together by ferrying freight and passengers across the length and breadth of the country. As the Indian economy moves into a high growth trajectory the Railways have also stepped-up developmental efforts and are preparing themselves for an even bigger role in the future.
